

END TACKLE

Safety Bolt Rig

In recent years the bolt rig has accounted for a large number of specimen fish and has become the most popular and safe carp rig in use. It is constructed of a heavy lead attached to the safety lead clip which is pushed onto size 8 swivel tied to the mainline. The idea is that the lead can be pulled off of the clip if it gets snagged up leaving the clip and the mainline free. The tail rubber holds the lead in place on the arm of the clip. In case of a bite once carp starts to run with bait the weight resistance on the line will result in instant hook-set.

Running Rig

This is the classic of carp rigs. In this rig set, run rings with large diameter were used in order to reduce the line friction to minimum and prevent fish from feeling any resistance. In case of a snag the lead will be released.

Rig Sets

| Item No. | Description | No. of Pieces |
|----------|----------------------------|---------------|
| 05527 | Safety Bolt Rig | 5 / Set |
| 05526 | Safaety Runing Rig | 5 / Set |
| 05529 | Running Rig | 5 / Set |
| 05530 | Semi-Fixed Running Rig | 5 / Set |
| 05532 | Helicopter Rig - Dual L.C. | 5 / Set |

Safety Running Rig

Our safety running rig is build on the same safety principles as the safety bolt rig with one exception that carp is allowed to swim away with the bait feeling no resistance. When using this method the hook has to be set by the angler.

Semi-Fixed Running Rig

This set up can be used as a semi-fixed bolt rig or as a semi-fixed running rig depending on where you position the main run ring. The main run ring can be pushed into the recess to become semi-fixed bolt rig or it can be left to slide as a running set-up until the run ring hits the safety rubber bead which will result in a hook-set.

Helicopter Rig - Dual L.C.

Our dual lead core helicopter rig is the newest addition to the wide selection of carp rigs. Lead core ensures that the bait lays flat on the lake bed and eliminated tangles. This rig is very fast and easy o assemble.

Semi-Fixed Safety Beads

Semi-fixed safety beads have a dual use. They can be used to create safety "bolt" rigs or semi-fixed running rigs depending on the position of the main run ring.

Rubber Beads

Rubber beads can be used as back stop beads to enhance "bolt" effect. They are also used as one of the components in building safety running rig. Available diameters 4mm, 6mm.

Tail Rubbers

Tail rubbers are pushed over the lead clip to prevent the weight from being discharge under normal use. They are also used with silicon tubing to hold it in place. Tail rubbers are also used with "the method feeders" as well as in-line leads.

Safety Lead Clips

Our safety lead clips are offered in a standard and strong version. They are designed for the ultimate safety "bolt" rig. Their function is to allow safe lead discharge in case of a snag.

Buffer Beads

Buffer beads are made of shock absorbent rubber compound to protect your swivel and knot, grip your tubing and let your lead run freely.

Run Rings

These large diameter run rings are designed to be used with running legers set-ups. Run rings reduce line friction and resistance caused by the lead.

Rig Accessories

| Item No. | Description |
|----------|----------------------------|
| 05514 | Safety Lead Clips |
| 05515 | Safety Lead Clips "strong" |
| 05520 | Tail Rubbers |
| 05517 | Run Rings |
| 05519 | Semi-Fixed Safety Beads |
| 05518 | Buffer Beads |
| 05601 | Rubber Beads "4mm" |
| 05602 | Rubber Beads "6mm" |

Hair Stops

Our hair stops are designed to prevent boilies or other carp bait from sliding off the hair rig.

Shrink Tube

Shrink tube is perfect for improving the hooking efficiency of any hook by curving the hook-link inwards. It shrinks down to one third of its original size to form a really neat bait presentation.

Silicone Tubing

Silicone tubing is primarily used as an anti-tangle leader above the lead. It also adds an extra layer of abrasion resistance. Available diameters: 1.0mm, 1.5mm. Color: black, green olive.

Swivels

Top quality rolling swivels with black nickel finish. 80 lbs test. Available in size: 4, 6, 8, 10, 12, 14.

Anti-Tangle Plastic Tube

Very useful in mounting cage feeders or leads to the snap.

Rig Accessories

| Item No. | Description |
|----------|--------------------------|
| 05709 | Hair Stops |
| 05501 | Silicone Tubing "1.0mm" |
| 05502 | Silicone Tubing "1.5mm" |
| 05509 | Shrink Tube |
| AJ-KR103 | Swivels |
| AJ-403 | Anti-Tangle Plastic Tube |
| 03626 | PVA Bags |

PVA Bags

One of modern methods of carp fishing is using PVA bags. This method can be deadly because it presents a bed of groundbait or pellets with your hookbait amongst them, being the only one of its type and size. This is also the most effective method of catching carps from a distance when it is impossible to chum the distant area with a spod rocket or sling shot. There are different types of PVA bags available. They can be woven into a sock like expandable bag or they can look just like plastic bags. It takes approximately 30-90 sec for the PVA bag to completely dissolve in water.
