

High performance braided lines

Siglotex Royal by BALZER

This new, braided high performance line is the logical further development of our well know Siglotex. It was possible to boost the tensile strength again and the braiding was optimized.

The advantages of the Siglotex Royal:

- **Very high pound test:** much higher pound test than monofilament lines
- **Extremely little stretch:** only about 5% stretch so that each strike lands securely even at long distances and in very deep water. No comparison with monofilament lines
- **Absorbs virtually no water:** by contrast with monofilament lines, the Siglotex Royal absorbs practically no water so that its dry strength is almost completely retained. For the sake of comparison: monofilament lines lose up to 50% of their dry strength in water
- **Almost no loss of color:** many braided lines lose their coloring very quickly in water. Owing to a new dyeing technique the loss of color of the Siglotex Royal is reduced to a minimum
- **Extreme suppleness:** the Siglotex Royal is very supple, which has an extremely positive impact on casting
- **Long serviceable life:** extremely little abrasion and completely insensitive to sun rays, it is guaranteed to have a long service life
