

Platil® Ghost (100% fluorocarbon)

Platil®'s new 100% Fluorocarbon Ghost line is almost invisible in the water because of its very high transparency and the light-breaking-factor with (1.42) nearly identical to this of water (1.33) ensuring more strikes. Platil® Ghost is a fast sinking line because it's heavier than freshwater by 78%. Its anti-water-absorption surface coating gives the line greater durability and ensures longer casting distance.

Platil® Ghost (110yd/100m)
